Assignment 9: Simple Consumer

This isn't actually anything like what you need for the assignment, but it will consume and display messages:

```python
"""
Sample Kafka consumer, to verify that messages are coming in on the topic we expect.
"""
import sys
from kafka import KafkaConsumer

topic = sys.argv[1]
consumer = KafkaConsumer(topic, bootstrap_servers=['node1.local', 'node2.local'])
for msg in consumer:
    print(msg.value.decode('utf-8'))
```
